

Clarino™ Recycled Nylon

Taking Kuraray's role as a responsible innovator to the next level, it was a logical step to develop a collection of non-woven microfibre that focuses on today's demand for sustainability.

Clarino™ leads the way in sustainable innovation with Eco RX8060—an exclusive material made from 100% recycled nylon fibre blended with PU. Designed to further reduce waste and harmful practices, these advanced fabrics offer high durability and quality while supporting a cleaner future. It's a big step toward responsible design without compromise.
